## Innovation

### European Innovation

Dual Action Tilt + Turn windows and doors operated by a single, convenient handle.

Turn the handle up — and tilt the sash inwards for comfortable, draft-free ventilation.

Turn the handle sideways — and swing the sash open for easy cleaning and emergency exit.

Turn the handle down — and engage the multi-point locking mechanism to seal out the wind, the rain, and the noise.

## Your Home, Your Vision

Express your feelings and your personality with shapes, sizes, colors, and combinations not possible with conventional windows and doors.

You will be pleased with the potential for creative expression the 900 Series allows you. Round tops, rake shapes, large opening sashes, combined window-door frames, storm-resistant coupling mullions, custom glass options, muntin divider bars, and a choice of handle shapes and finishes — just some of the possibilities.

Above all, you will enjoy living with your new windows and doors to a degree you did not think possible. Every time you open one, you'll be glad you chose the 900 Series from **innotech Windows + Doors**.

## Cool in Summer, Warm in Winter

It is no secret that the most comfortable windows are made of energy-efficient uPVC profiles with integral insulating air chambers.

The same technology that keeps you cool in summer keeps you warm in the winter. Either way, you save on heating/cooling bills, and enjoy the feel of a material that is always comfortable to the touch.

Choosing the right windows and doors is only part of the comfort solution. Your innotech dealer will help you to choose appropriate glass combinations for your climate to enjoy year-round comfort for you and your family.

## Easy to Maintain

From the dirt- and stain-resistant finish, to the smooth, easy-to-clean contours of the frame, you will be impressed with how little maintenance these attractive products need.

Self-lubricating hinges always open easily, and all hardware allows adjustment to compensate for wear and building settlement. The open-in feature even makes it possible to clean glass from the inside of the room. No more ladders, hoses, and poles!

Easy to maintain, clean, and adjust. Peace of mind for anyone whose job it is to keep the home in good working order and looking great!

and Peace of Mind

### A breath of fresh air

Why do these windows and doors have the Tilt-in feature? So that you can enjoy comfortable, healthy living without annoying drafts.

Because warm air rises, the best place to open a window or door is near the top. The tilt-in design draws warm, stale air out, and causes fresh air to flow in gently from the sides, without creating a draft. Air circulation happens even if there is no wind blowing, and even if there are no other windows in the room.

Inadequate ventilation can compromise your health: research shows that indoor air is often up to 100 times more contaminated than outdoor air. That is why in Europe, Tilt-in windows and doors are considered the healthful choice.

### Designed for all climates

From icy cold winters to the heat of a desert sun, in corrosive urban environments or facing salty coastal storms, 900 Series products keep you safe, dry, and comfortable, year after year. No strangers to extreme conditions, they are used throughout North America and around the world. Every door and window features pressure-equalized rainscreen design, the same technology used to keep the tallest skyscrapers wind- and water-tight.

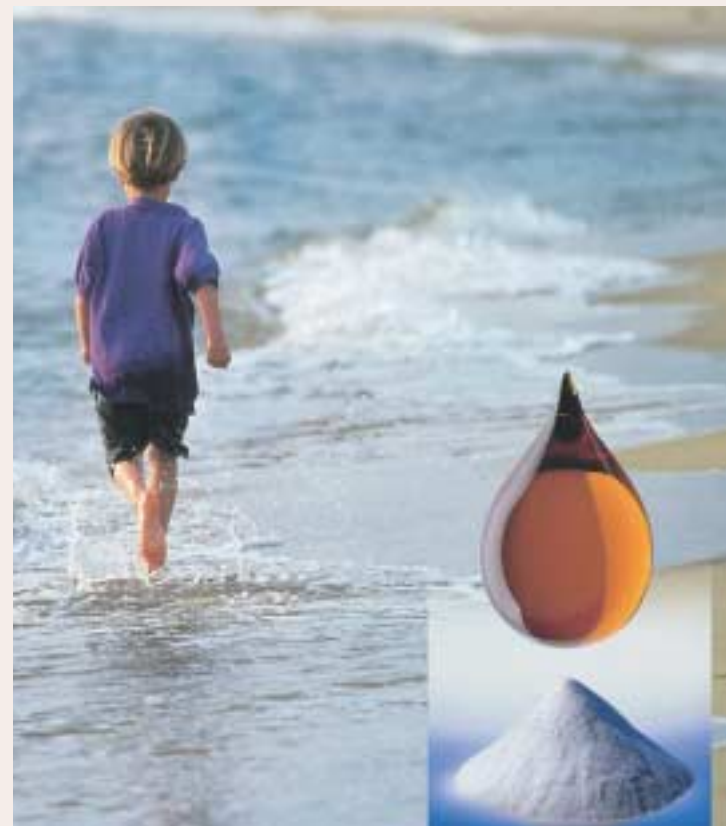

The results speak for themselves. Beside your front door, or on the fortieth floor — you can rely on the 900 Series, just as architects do.

### Salt of the earth

Did you know that one of the main ingredients in a modern uPVC window is common salt? Combined with petroleum by products, it is converted into an environmentally friendly, recyclable material that can last for generations, then be reprocessed into new windows and doors.

Developed in Europe where concerned consumers have long demanded non-toxic and renewable building products, you can feel good knowing that these windows and doors are a wise choice for the future of our planet.

### Safe and Secure

Windows should not only keep out wind, rain, and noise: they should let you feel secure from intruders.

All 900 Series windows and doors come with multi-point locking hardware, providing far more security than conventional windows and doors. Reinforced with galvanized steel, each sash is surrounded by a band of steel hardware that bolts the frame at multiple points on all four sides when locked. In the Tilt-open position, windows and doors allow ventilation without granting entry to casual intruders.

For even greater security, you can order impact-resistant glazing to give you peace of mind — even in high-risk environments.

Windows + Doors

Series 900

### European Design - Manufactured in North America

It takes time for great ideas to mature into robust, refined, and reliable products. From 1954, when they built the world's first mass-produced vinyl windows, to today — TROCAL has continued to innovate. The culmination of these efforts is the 900 Series, an elegant European-designed system of windows and doors that keep you and your family safe and comfortable no matter what the weather.

It also takes a great team to build great window and door products. Your innotech Windows + Doors dealer is your direct contact with a team that literally spans the globe, from your community all the way back to Europe — a team that works to exceed your expectations.

The 900 Series offers you the best of both worlds: famous European design and quality, carefully crafted in North America by innotech Windows + Doors Inc.
